

KHAI NGUYEN

California, US | (714) 251-1663 | khaikdng@gmail.com

Staff-level Software Engineer with 10+ years building reliable backend platforms, integrations, and full-stack products across healthcare, real estate, and lending. Experienced across Python/Django, C#/.NET, TypeScript/React, AWS, PostgreSQL, event-driven systems, architecture, mentoring, and production operations.

EXPERIENCE

Senior Software Engineer at blinkrx.com from MARCH 2022 to JULY 2026

- Greenfield built Prescription Service (Python/Django, PostgreSQL, EKS) to replace legacy pharmacy monolith; service now handles 59.5M API requests/month at 0.003% error rate and 101ms average latency, with shadow-mode migration framework enabling safe, incremental cutover across 5 repos
- Designed async ORTF pharmacy transfer pipeline (SQS, multi-step orchestration) reducing partner onboarding from 14+ manual steps to a guided admin workflow; imported 10,700+ prescriptions across 3 pharmacy partners
- Led Rx deduplication compliance system through 3 versions (exact match → manual transfer-back → therapeutic duplicate detection), automatically identifying 21,627+ duplicate prescriptions and saving ops team weeks of manual review
- Integrated 2 PBM insurance partners (Carepoint, Truepill) adding 323K insurance claims/month; extended internal messaging library with SQS delayed processing now used across all services
- Built production LangGraph workflows for unstructured eRx notes: extracted patient data and classified Nurtec ODT use (acute treatment vs. prevention) via regex-first rules with AI fallback; partnered with Data Engineering on implementation
- Authored 8 disaster recovery runbooks and led a live exercise validating a 30-minute service recovery target

Senior Software Engineer at apartments.com from AUGUST 2019 to MARCH 2022

- Designed RESTful APIs and background services for resident and community messaging workflows, leveraging Kafka-based pub/sub patterns and deployed to an AWS-hosted VPC
- Built a web service from scratch for online tour scheduling workflows used by apartment communities, integrating third-party APIs into Apartments.com product flows
- Mentored associate developers and conducted technical interviews for the team

Software Development Engineer at quickbridge.com from OCTOBER 2018 to JULY 2019

- Developed and deployed an SMS solution (integrating with Twilio's SMS API) for internal CRM web application within a three-month time frame, utilizing AngularJS, ASP.NET Core, and MS SQL Server, facilitating bidirectional communication between loan processing agents and clients
- Led migration from .NET Framework to .NET Core for Linux container hosting, reducing infrastructure cost and improving development velocity; trained the team on API design and ASP.NET Core practices

Software Engineer at cudirect.com from JUN 2015 to SEP 2018

- Built loan-origination features and NServiceBus microservices enabling publisher-consumer messaging between the lending system and car dealership platform using WPF, ASP.NET, and SQL Server

SKILLS

- **Platforms:** Python/Django, C#/.NET, TypeScript/React, PostgreSQL, SQL Server, REST APIs, AWS (EKS, SQS, SNS, RDS), Docker, Kubernetes
- **Architecture & Delivery:** Distributed and event-driven systems, LangGraph, Kafka pub/sub exposure, NServiceBus, third-party and AI/LLM integrations, CI/CD, observability, incident response, disaster recovery

EDUCATION

B.Sc. cum laude in **Biochemistry** with **Computer Science**

California State University, Long Beach
