SUMMARY

Staff-level software engineer with 10+ years building reliable backend platforms, integrations, and full-stack products across healthcare, real estate, and lending. Experienced across Python/Django, C#/.NET, TypeScript/React, AWS, PostgreSQL, event-driven systems, architecture, mentoring, and production operations.

EXPERIENCE

Senior Software Engineer · BlinkRx

Mar 2022 - Jul 2026

- Built a Python/Django prescription system of record handling approximately 59.5M API requests/month at a 0.0034% 5xx error rate and 101 ms average latency; designed shadow comparisons and feature-flagged migration for incremental cutover from a legacy monolith.
- Designed an asynchronous SQS pharmacy-transfer pipeline with idempotent orchestration, throttling, progress tracking, and operator controls; imported 10,700+ prescriptions across three partner onboardings and replaced 14+ manual steps.
- Led prescription deduplication through three iterations spanning exact, transfer-back, and therapeutic matching; identified 21,627+ duplicates in the latest measured three-month window.
- Built a configurable medication-label platform covering all 50 states and approximately 27K-39K monthly label operations while reducing generation time from over five seconds to under one second.
- Integrated two insurance partners into submission, reversal, webhook, retry, and throttling workflows, adding approximately 323K claims/month.
- Authored eight disaster-recovery runbooks and facilitated four live recovery scenarios, validating a 30-minute recovery time; built and deployed the first production AI agent in BlinkRx's pharmacy-workflow domain.

Senior Software Engineer · Apartments.com · CoStar Group

Aug 2019 - Mar 2022

- Designed REST APIs and background services for resident and community messaging workflows deployed in an AWS-hosted VPC, with Kafka-based pub/sub exposure for asynchronous service communication.
- Built a backend service from scratch for online tour scheduling, integrating third-party APIs into production apartment-community workflows.
- Mentored associate developers, onboarded engineers across the Apartments.com codebase, and conducted technical interviews.

Software Development Engineer · QuickBridge

Oct 2018 - Jul 2019

- Delivered bidirectional SMS messaging for a loan-processing CRM within three months using Twilio, AngularJS, ASP.NET Core, and SQL Server; led migration from .NET Framework to .NET Core for Linux container hosting.

Software Engineer · CU Direct

Jun 2015 - Sep 2018

- Built loan-origination features and NServiceBus publisher/consumer services connecting lending and dealership systems using C#/.NET, ASP.NET, WPF, and SQL Server; led a TFVC-to-Git migration and trained developers across 4-5 teams.

SKILLS

Backend	Python, Django, C#/.NET, REST APIs, PostgreSQL, SQL Server
Cloud & systems	AWS, EKS, Kubernetes, SQS, SNS, Kafka pub/sub exposure, NServiceBus, Docker
Product & operations	TypeScript, React, third-party and AI/LLM integrations, CI/CD, observability, incident response, disaster recovery

EDUCATION

B.Sc. cum laude, Biochemistry with Computer Science

California State University, Long Beach
